Report on "One Day Workshop on Research Methodology"

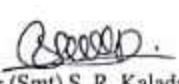

Date of Event: 4th July 2024

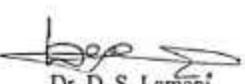

Under IQAC initiative one day state level workshop (self financed) on "Research methodology" was organised by the college on 4th July 2024 for post-graduate students and young faculty members of the college, sister concern institutions and other colleges. Inaugural function was conducted with welcome note by Dr.(Smt)S. R. Kaladagi, Dr. D. S. Lamani, IQAC coordinator briefed about the event and introduced the chief guest (first session guest speaker) Dr. Sunilkumar M. Hosamani, Assistant Professor, Department of Mathematics, Rani Channamma University, Belagavi who is having 20 years of research experience.

In the first session, resource person Dr. Sunilkumar Hosamani initially focused on seven steps to be followed by a researcher. Dr. Hosamani made the students and young faculty members to understand the scope of research and requirements needed to go for research. He emphasised on motivation, curiosity, thinking in a different way, commitment, analysis of trust worthy and reproducible data which are the key points of successful researcher. By taking the example of Graph theory, then extended the application of graph theory to Chemistry and Physics part as well. He discussed on setting-up experiments, collecting & analysing the data, result and discussion with conclusion which are required to draft a manuscript for communication (short communications or articles) to various publishers like ACS, RSC, Elsevier etc.

In the second session, Dr. M. B. Patil introduced the resource person of the second session Dr. S. G. Karkun, Librarian, Basaveshwar Engineering College, Bagalkot. Dr. Karkun explained the literature survey and how to choose and list out the references in standard format. He emphasised the usage of various search engines like Google, Google Scholar, N-List, BASE, CORE, Pub Chem, Chem Spider, Springer etc and demonstrated each with examples. He explained about citations and H index which are very much important to understand the research profile of a researcher. Dr. Karkun encouraged the young teachers and post-graduate students to develop the research attitudes.

Dr. S. M. Gaonkar Principal of the college delivered the presidential remarks and encouraged the students to develop research attitude by participating in such workshops. Smt. S. G. Hunasikai, Student Welfare Officer; Dr. D. S. Lamani, IQAC coordinator; Dr.(Smt) S. R. Kaladagi, Program Coordinator, Dr. V. S. Hegde, Chairperson - Research Committee and all faculty members were present in the program. After each session students were interacted with resource person and program was found very fruitful. Dr. Jayashree Uppin, HOD of Biotechnology who anchored the program summarised the outcome of the event. Miss. N. Y. Neeralakeri delivered the vote of the thanks.

Report on
"One Day National Seminar on Challenges and solutions in Science &
Technology"(CSST-2024)
Date of Event: 29thAugust 2024

Under IQAC initiative one day national seminar (Alumni Association sponsored) on "One Day National Seminar on "Challenges and Solutions in Science & Technology" (CSST-2024) was organised by the college on 29thAugust 2024 for post-graduate students and young faculty members of the college, and other colleges. Inaugural function was started with welcome note by Principal Dr. S. M. Gaonkar. Convenor Dr. D. S. Lamani, IQAC coordinator briefed about the event and introduced the chief guest (and first session guest speaker) Dr. M. K. Rabinal, Professor and Chairman Department of Physics, Karnatak University, Dharawd who is having 30 years experience in teaching and research. Dr. Rabinal claimed that research and teaching must go side by side. President of inaugural function Sri. G. S. Sulibhavi Chairman, College Governing Council, B.V.V. Sangha, Bagalkote insisted the students to take full use of such national seminars and conferences. Dr. B.N.Kiresur President of Alumni Association was also present in the inaugural function.

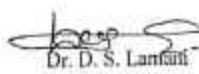

In the first session, resource person Prof. M. K. Rabinal initially justified the title of the national seminar and discussed the necessity of such seminars in college level. Prof. Rabinal delivered a talk on "Essentiality of Research in Higher Education". During his talk he gave all the data related to research in India and other developed countries. He emphasized on motivation, thinking in a different ways, commitment, analysis of trust worthy and reproducible data, which are the key points of successful researcher.

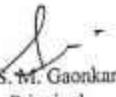

In the beginning of second session, Dr. M. B. Patil introduced the resource person of the second session Dr. D. M. Pore, Professor of Organic Chemistry, Department of Chemistry, Shivaji University, Kolhapur. Dr. Pore delivered a talk on "Identification of Products in Organic Transformation : A Great Challenge".

In the beginning of third session, Dr. Jayashree Uppin introduced the third session speaker K. G. Girish, Ecologist, Panchavati Research Academy for Nature, Sagar-Shivamogga. Dr. Girish delivered a wonderful talk on "Status and Conservation Challenges in Amphibians of Western Ghats" Dr. Girish discussed many challenges and solutions related to amphibians by showing video clips and many rare photos of variety of amphibians. At the end, eight students gave ppt presentation on various thirst areas of research and best three are selected for awards.

Dr. S. M. Gaonkar Principal of the college, Smt. S. G. Hunasikai, Treasurer, Alumni Association, Dr. D. S. Lamani IQAC coordinator, Dr. S. R. Kaladagi Program Coordinator, Dr. V. S. Hegde Chairperson - Research Committee and all faculty members, PG students were present in the program. 7. Brief Summary of Ph.D. Work:

Intrinsic disorder in amorphous semiconductors does not permit the chemical doping to alter the charge carriers, as a result the use of these materials in device applications becomes quite limited. The observation of p- to n-type conduction change in Ge-Se-Bi (Pb) glassy semiconductors created a special interest. Results of detailed investigations on these materials led to propose that microscopic inhomogeneity is the origin for conduction change in these materials. We aimed to study phase separation in Ge-Se-X (X=Bi,Pb,In) compositions by thermal and X-ray structural investigations. Our results clearly show that these materials are microscopically inhomogeneous and the above phenomenon of conduction change can be explained in the framework of chemical and mechanical thresholds.

i). **Transition Ion Drift Measurements:**

The existence of Space Charge Region at the interface of p-n/Schottky junction can be explored to measure the diffusion coefficient of mobile ionic impurities by probing transient capacitance. We applied this method to measure diffusion coefficient of Cu in CuInSe₂, Li and Ag in CdTe and HgCdTe single crystals, which are important photovoltaic materials. Our measured results are in close agreement with reported ones. Hence, the technique is simple, reliable and non-destructive to characterize ionic mobility in semiconductors.

ii). **Ohmic Contacts to p-CdTe and p-CuInSe₂:**

Forming a good ohmic contact to these semiconductors remained a major challenge. The low-level p-type doping and complex defect chemistry of these materials never permitted to form better ohmic contacts. We propose a simple room

temperature electrochemical technique to form stable, low resistance and high current density ohmic contacts to p-CdTe and p-CuInSe₂ single crystals by electro-diffusion of Hg ions prior to metal contact.

Meyer-Neldel Rule in Amorphous Silicon:

Meyer-Neldel (MN) rule relates dc conductivity pre-factor to activation energy. Different mechanisms have been proposed to explain the origin of MN-rule in semiconductors, of these structural inhomogeneities, temperature dependence Fermi-level shift are prominent ones. Earlier studies on MN-rule were invariably affected the Density of States (DOS) in amorphous silicon. We studied MN-rule in (n+-i-n+) amorphous Si without affecting DOS by low intensity photoconductivity measurements to show that the statistical shift of Fermi-level is the cause of MN-rule in amorphous silicon.

Organic Light Emitting Diodes:

The work involves the design and development of semiconducting organic molecules to have a balanced charge transport so that efficient organic light emitting diodes could be realized. In this respect organic molecule like tri-phenylamine -oxadiazole-fluorene triad was synthesized and all solution based multilayer light emitting diodes were fabricated by spin coating and systematically studied for their electroluminescent properties. To support the results DFT calculations were performed to estimate HUMO-LUMO levels and other parameters. The external quantum efficiency (EQE) close to 0.36% has been observed. The emitted light from these devices varied from light blue through to green by the systematic chemical modification of the molecular subunits.

4. Current Research Areas at Karnatak University, Dharwad

- Molecular Electronics:** In recent time, the molecular electronics, that involves binding of organic molecules between two electrodes for charge transport measurements, has become an important field to push miniaturization of electronics down to nano-regime. Presently we have been studying the class of organic molecules on silicon surface to constitute metal-molecules-silicon junction to understand the charge transport through such junctions in order to understand the role of dipole-moment, conjugation and length of molecules. Such

- b) ***Bio/Biologically Conjugated Structures for Electronic Devices:*** The deoxyribonucleic acid (DNA) is a highly functional, versatile and genetically coded bio-molecule. It may provide a unique platform to constitute the new generation electronic devices with unexplored physics and chemistry. In the present work, we have been trying to constitute electronic junctions using DNA, its functionalized molecules and also its interfaces with certain active nanomaterials, such as PbS, PbSe and PbTe, to understand the charge transport mechanism so that a new generation electronics can be realized.
- c) ***Quantum Dots for Photovoltaic Devices:*** Different semiconductor nanoparticles have been prepared to implement them for low-cost solar cells. Zinc oxide infused with certain visible active dyes by simple electrochemical route that is anodic dissolution of zinc is prepared. These composites are highly stable and those will be implemented to develop electrochemical photovoltaic cells.
- d) ***Chemical Bath Deposition of Quantum Dots:*** The chemical bath deposition is simplest and oldest method of direct deposition of semiconductor films. We successfully deposited various materials such as CdS, CdS-dye composites, Ag₂S and Cu₂S etc. as low cost photovoltaic materials. We are in the process to put these materials to make heterojunction solar cells.
- e) ***Carbon and Metal Based Materials for Supercapacitors:*** Different films of graphene and metals (particularly copper and aluminum) are prepared as porous and flexible materials by simple routes, like self-assembly and electrochemical, to implement them to constitute symmetric and asymmetric supercapacitors. The electrochemical characterization of these with different electrolytes exhibit high specific capacitance that is evident from our recent research.
- f) ***Graphene-Metal Nanocomposites for Memory Devices:*** Various metal nanoparticles are loaded with reduced graphene that is prepared by solution route chemistry. Then they are subjected to memory-resistor (memristor) applications by sandwiching between two suitable electrodes. Attempts are being made to design both mono and bistable junctions by proper control of compositions of these composites.
- g) ***Nanoparticle Composites of Low Band Gap Semiconductor for Thermoelectric Applications:*** Low band gap semiconductors like Cu₂S, Bi₂S₃, Bi₂Te, PbTe etc. are active thermoelectric materials for energy conversions. Presently we are synthesizing nanoparticles of these semiconductors to design thermoelectric junctions. The nano-phase of these materials can provide

"electron-lattice and phonon-glass" phases that is an essential requirement for high thermoelectric efficiency. Our work aims to implement these materials for solar-to-thermal-to-electric energy conversion.

h) Metal Air Batteries

There is a continuous struggle develop the cheaper, denser, lighter and more powerful batteries due to various issues. The present electronics gadget batteries, particularly Li-ion batteries, demands inert atmosphere for their fabrication and application due to a high reactivity of its components. Recently there is paradigm shift towards metal air batteries which overcome the above difficulties. Particularly the Aluminum and Zinc air batteries are gaining more importance; still the research on these is in its infancy state. The inclusion of nanomaterials for the development of these batteries has brought a lot of hopes to see them as a potential contender for Li-ion and other existing batteries. Here the proposed work will be focused to eliminate the Zn metal dendritic growth that happens during the charging/ discharging cycles of these devices. This has been approached through the molecular grafting Zn electrodes by certain organic molecule and then deposition of Zn nanoparticles as active materials for metal air-batteries.
